At least one (non-statistics) question you would like to know the answer to that could be answered by analyzing data

I want to know that can we use statistical methods to analyze which soccer team will perform better in one match.

-

What you would love to be doing six months after graduation and then five years after that (what would make you excited to be doing?)

After six months of graduation, I will continue my study at graduate school, so I hope I can do well in my graduate study. After five years of my graduation, I hope I will be doing research in machine learning.

-

What you hope your greatest career accomplishment will be.

I hope my greatest career accomplishment will be a professor at a famous university.

-

and given these hopes and goals, what you are hoping to learn/accomplish/do in this course.

I hope I can be better at R programming, in particular I want to learn more about ggplot2, it is one of the best package in R, it is really useful.

-

Something else about me

I like soccer, and my favorite team is Real Madrid.
